IPv6 Routing and 10G Ethernet Switch Solutions for SMBs

PLANET GS-5220-24T4XV and GS-5220-24T4XVR Layer 3 Managed Gigabit Switches with **LCD Touch Screen** support both IPv4 and IPv6 protocols and Layer 3 OSPFv2 dynamic routing and static routing, and provide 24 10/100/1000Mbps Gigabit Ethernet ports and 4 10Gigabit SFP+ uplink slots. The GS-5220-24T4XV series can handle extremely large amounts of data in a secure topology linking to a data center/service provider backbone or high capacity servers. They can work with a 10Gbps SFP+ server adapter to help SMBs build the 10Gbps Ethernet network providing 10Gbps NAS (Network Attached Storage) or heavy transmission of video streaming service at an affordable price.

Cybersecurity Network Solution to Minimize Security Risks

The new generation of GS-5220-24T4XV series has the **cybersecurity** feature to protect the switch management and enhance the security for mission-critical network without extra deployment cost and effort. It expands its memory and upgrades the kernel of **SSH** and **SSL** protocols to provide strong protection against advanced threats. It includes a range of cybersecurity features such as **DHCP Snooping**, **IP Source Guard**, **ARP Inspection Protection**, **802.1x port-based** and **MAC-based network access control**, **RADIUS** and **TACACS+** user accounts management, **SNMP v3** authentication, and so on to complement it as an all-security solution. It consists of a maximum of 9 trunk groups with 2 ports for each group, and supports connection fail-over as well.

Powerful Security

The GS-5220 series offers a comprehensive **Layer 2 to Layer 4 access control list (ACL)** for enforcing security to the edge. It can be used to restrict to network access by denying packets based on source and destination IP address, TCP/UDP port number or defined typical network applications. Its protection mechanism also comprises **802.1x Port-based** and **MAC-based** user and device authentication. With the **private VLAN** function, communication between edge ports can be prevented to ensure user privacy.

Enhanced Security and Traffic Control

The GS-5220 series also provides **DHCP Snooping**, **IP Source Guard** and **Dynamic ARP Inspection** functions to prevent IP spoofing from attack and discard ARP packets with invalid MAC address. The network administrator can now construct highly-secure corporate networks with considerably less time and effort than before.

SMTP/SNMP Trap Event Alert

The GS-5220 series provide event alert function to help to diagnose the abnormal device owing to whether or not there is a break of the network connection, or the rebooting response.

User-friendly Secure Management

For efficient management, the GS-5220 managed switch series is equipped with console, web and SNMP management interfaces. With the built-in web-based management interface, the GS-5220 series offers an easy-to-use, platform independent management and configuration facility. The GS-5220 series supports SNMP and it can be managed via any management software based on the standard SNMP v1 or v2 Protocol. For reducing product learning time, the GS-5220 series offers **Cisco-like command** via Telnet or console port and customer doesn't need to learn new command from these switches. Moreover, the GS-5220 series offers the remotely secure management by supporting **SSH**, **SSL** and **SNMP v3** connection where the packet content can be encrypted at each session.

Intelligent SFP/SFP+ Diagnosis Mechanism

The series support **SFP-DDM (Digital Diagnostic Monitor)** function that greatly helps network administrator to easily monitor real-time parameters of the SFP and SFP+ transceivers, such as optical output power, optical input power, temperature, laser bias current, and transceiver supply voltage.

Digital Diagnostic Monitor (DDM)
