

Gaming Tools

The router provides a variety of gaming tools to bring you the most immersive gaming experience.

* Log in to the web management page of the router to use these gaming tools.

Game Panel

View real-time device status on an exclusive gaming dashboard, including RTTB effects, network traffic, performance, and connected USB devices. Also, your booting games and devices are displayed.

Game Detector

Users can see the real-time ping of their game server.

Game Port Forwarding

Game Port Forwarding includes built-in rules for popular online games. Simply select your game from the list and configure basic settings for it. An optimized gaming experience is just around the corner.

Game Statistics

Displays your gaming record, including data/traffic and the duration of every game played.

EasyMesh-Compatible

You can experience strong, stable, and seamless wireless connections throughout your home with EasyMesh.

Seamless Roaming

Connects mobile devices to your routers or extenders that provide the best coverage. Devices compatible with EasyMesh also share a single Wi-Fi name so you stay connected in every room.

One-Click Settings

Press the WPS button on the main router and the satellite device within 2 minutes of each other, then the EasyMesh network will set up.

Flexible Scalability

Flexibly scale your home networking with different vendors', different topologies, different protocols and different product categories.

*Failure may be due to firmware conflicts of different vendors. A better network connection can be established between all APs from TP-Link.

Need Help?

Q1. What should I do if I can't access the web management page?

- Reboot your router and try again.
- If you have multiple routers, change its setting to obtain an IP address at home.
- Verify that http://tplinkwifi.net is correctly entered in the web browser's address bar (e.g. http://192.168.1.1 or http://192.168.1.1 in the web browser).
- Use another computer to try again.
- Disconnect and reinsert the network cable in ports.

Q2. What should I do if I can't access the internet?

- Power off your router for about 5 minutes, then power it on and check if the light of your connection shows more than one Ethernet port (the light of the port you are using should be on).
- Check if the internet is working normally by connecting a computer directly to an Ethernet port. If it is not, contact your Internet service provider.

- Log in to the web management page, and go to the Network Map page. If the connection to the WAN port is normal, then the connection will go to Advanced -> Network -> Click Advanced Setting, select the following DNS Address, set the primary DNS to 192.168.1.1 and the secondary DNS to 8.8.8.8, then click Save. If the connection is still not normal, please contact your Internet service provider.

- For cable Internet users, log in to the web management page of the router, click Advanced -> Network -> Set MAC Address. Select Clone Current Device MAC and click Save. Then reboot both the modem and the router.

Q3. What should I do if I can't get my wireless password?

- Find the label at the bottom of the router. The label contains the MAC address and the wireless password. It can be found on the label at the bottom of the router.
- Connect a computer directly to the router via an Ethernet cable. Log in to the web management page of http://tplinkwifi.net and go to the Wireless page to retrieve or reset your wireless password.

Q4. What should I do if I forget my web management page password?

- If you are using a TP-Link ID to login, click Forget Password on the right side of the login page.
- After you have forgotten the password, unplug the power cable. After briefly, press and hold the Reset button until the LED blinks once. Then visit <http://tp-linkwifi.net> to create a new login password.

Q5. How should I position my router for optimal Wi-Fi performance?

- Hold the router vertical while working.
- Don't place your router in a corner or a closet.
- Avoid obstacles and high-power electrical equipment.
- Place your router in a central location at a certain height.

Quick Installation Guide

Tri-Band Wi-Fi 7 Gaming Router

1 Connect the Hardware

2 Set Up the Network

Method ONE: Via the TP-Link Tether App

Method TWO: Via a Web Browser

LED Explanation

You can check the router's working status by following the LED explanation.

- **Alternating Red & Blue**
The router is starting up.
- **Selected RGB Effect (Default: Fire effect)**
The router is working properly.
- **Blinking Red**
No internet connection.
- **Blinking Orange**
The Wi-Fi is off.
- **Blinking Yellow**
The Wi-Fi is off and there is no internet connection.
- **Blinking Blue**
The router is upgrading firmware, establishing WPS connection, or resetting to factory default settings.

Button Explanation

Physical buttons are located on the back of the router.

- | | |
|-------------------------|---|
| WPS/Wi-Fi Button | Press this button and immediately press the WPS button on your client device to start the WPS process. Press and hold this button for about 2 seconds to turn on or off the wireless function of your router. |
| LED Button | Press this button to turn the router's LED on or off. Press and hold this button for about 2 seconds to switch RGB effects. |
| Power Button | Press to turn on/off the router. |
| Reset Button | Press and hold this button until the LED blinks blue to restore factory default settings. |

True Gaming Acceleration

The router prioritizes and accelerates your online gaming to always run at top performance.

• Gaming Port

Automatically prioritizes your game device traffic, letting you focus on play, not battling for bandwidth.

Setup

1. Connect your gaming device to the Gaming Port of your router using an Ethernet cable.
2. Visit <http://tplinkwifi.net> and log in with your TP-Link ID or the password you set for the router.
3. Go to Game Center > Game Acceleration > QoS. Enable QoS and fill in the maximum bandwidth provided by your ISP.

- **QoS**
Automatically detects and optimizes gaming streams to accelerate your game applications, even on a crowded network, to run at high speeds.

Setup

1. Visit <http://tplinkwifi.net> and log in with your TP-Link ID or the password you set for the router.
2. Go to Game Center > Game Acceleration > Gear QoS and fill in the maximum bandwidth provided by your ISP.
3. Choose Gaming.

• Game Server Acceleration

Slash your game ping and packet loss with GPN Gamers Private Network. A shorter path from gamers to game servers driven by real-time measurements and AI to your secret weapon for winning.

Setup

1. Visit <http://tplinkwifi.net> and log in with your TP-Link ID or the password you set for the router.
2. Go to Game Center > Game Acceleration. Log in to the account of your subscribed GPN service and select the device you want to accelerate.

• Gear Acceleration

Prioritize and accelerate your game devices on a crowded network to reduce game latency and boost game speed.

Setup

1. Visit <http://tplinkwifi.net> and log in with your TP-Link ID or the password you set for the router.
2. Go to Game Center > Game Acceleration > Gear Acceleration and turn on Device Priority to prioritize internet traffic for specific devices.

• Mobile Game Acceleration

Minimize lag and latency for mobile gaming during network congestion to give yourself the edge whether you're playing solo or on a team.

Setup

1. Launch the Tether app.
2. Go to Game Center and enable Game Boost.
